

Formation-top altitudes are from the Ground-Water Information Center data base at the Montana Bureau of Mines and Geology. Primary data source is USGS Open-File Report 81-415. Borehole locations have been selected for clarity of display and geographic representation and may plot in areas where the Judith River Formation is shown as absent because of complex geology and the accuracy of the formation boundary. The Judith River Formation and equivalent rocks boundary was derived from Bergantino, 1992, Montana Bureau of Mines and and Geology Open-File Report 246-D. Prepared with support from the Montana Department of Natural Resources and Conservation grant number RIT-89-8543. Digital cartography by Joel G. Hall.
